

Eyad Kelleh

I run adoption programs, not slide decks

I ship production software and run adoption programs across Germany. AI helps on the workbench; judgment stays in the loop.

Proof

Experience Ten years in production	Role Cursor Ambassador, adoption with standards
Community 152+ builders at Frankfurt Build Day	Shipped Charge a Smile on the App Store

About

I'm a software engineer in Kassel with ten years in enterprise production, from DHL logistics systems to customer apps at Micromata. Security is how I work from the first line, not a checkbox at the end.

As Cursor Ambassador, I run hackathons, Build Days, and Café Cursor sessions across Germany, speak at conferences, and ship apps like Charge a Smile.

Work

I ship with security in mind, use AI where it earns its place, and keep human review at the gate. I teach the same discipline in workshops, hackathons, and community programs.
